

2010 TransWorld Transformer Kit/Adapter

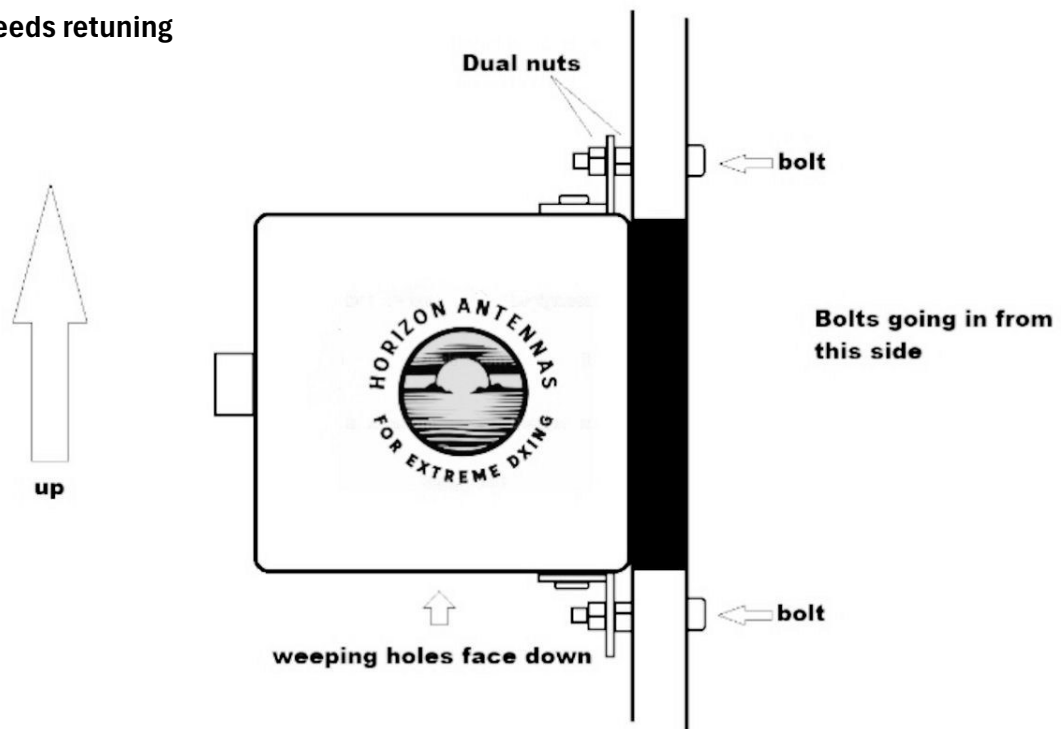

Coupled with any TransWorld Vertical dipole structure, your station becomes an on-the-air “Big Dog!”

Forget powering controllers, changing multiple switching arrays, or worrying with expensive control cables. All you need is our transformer, a feed line, and a transceiver.

The Big Dog gives immediate access to several HF bands. It follows your transceiver and changes bands without pushing any buttons, changing switching arrays, or re-tuning. You can work more stations in less time than ever before. Plus, it is priced less than cumbersome switching arrays sold by other companies.

Why the Big Dog Transformer Kit?

1. It handles 2 kW – not just 1.2 kW
2. It lets you work seven bands instead of five
3. No external power source is needed
4. It is weather resistant – no external cover is necessary
5. It never needs retuning

INSTALLATION:

If switching array is present, remove the array and replace it with the Big Dog transformer as shown.

SWR PLOTS:

Band	Band Width	VSWR
10 M	Entire Band	1.3:1 to 1.8:1
12 M	Entire Band	1.7:1 to 2.0:1
15 M	Entire Band	1.3:1
17 M	Entire Band	1.2:1
20 M	Entire Band	1.1:1
30 M	Entire Band	1.2:1
40 M	Entire Band	2.0:1 to 2.5:1

These results are without a tuner
